

A HIGHER LEVEL OF CONTROL

Introducing Cyanarox™

INSECTICIDAL BAIT

A ready-to-use granular bait to control house flies

LOW

Starbar® products help you set the bar for insect control precisely at every level of your operation. Among leaders in the fly bait industry, Starbar already produces quality products you know and trust such as QuikStrike® Fly Bait and Golden Malrin® Fly Bait*. That roster is bolstered with the addition of Cyanarox™ Insecticidal Bait, a low bulk density granular bait. The active ingredient cyantraniliprole has a completely different mode of action, which can be used in a rotational program to help prevent resistance among house flies. Cyanarox™ Insecticidal Bait can be easily applied to indoor and outdoor areas.

More About Cyanarox™ Insecticidal Bait

Unique Active Ingredient

Cyantraniliprole kills insects through a mode of action that modulates an insect's ryanodine receptor. This disruption of muscle contraction leads to paralysis and death for the insect.

Population Control

Upon ingestion, coordinated movements of house flies are impaired. After flying away, house flies will experience paralysis leading to death. This makes Cyanarox™ Insecticidal Bait a valuable fly control tool in your integrated pest management program.

Indoor and Outdoor Control

Cyanarox™ Insecticidal Bait can be used indoors in a bait station and outdoors in common areas where high fly densities are most apparent.

Small Product. Big Impact.

Carrying a low bulk density, Cyanarox™ Insecticidal Bait has fewer pounds of fly control product to store, plus an increase in the area treated per pail. One pellet can control up to 95 flies.

Application Rates

Fly Bait	Pounds per pail	Low use rate oz./1,000 sq. ft.	1,000 sq. ft. applications/pail
QuickBayt® Fly Bait	35	5.7	98
Cyanarox™ Insecticidal Bait	28	3.2	140

One pail of Cyanarox™ Insecticidal Bait can provide up to 42 more applications than the competitor. Based on product labels as of March 12, 2018.

Another Tool in an Integrated Pest Management Toolbox

One of the problems in controlling flies is fighting resistance. Over time, flies may develop a tolerance to a certain bait. When baits are rotated properly, using different active ingredients and modes of action, flies are less likely to develop resistance to any of them. **Cyanarox™ Insecticidal Bait** can be used in rotation with **QuikStrike® Fly Bait** and **Golden Malrin® Fly Bait** to form a formidable, three-pronged rotational approach to manage against resistance.

Always read and follow label directions. *Golden Malrin® Fly Bait (EPA Reg. No. 2724-274) has been reclassified by the U.S. Environmental Protection Agency (EPA) as a Restricted Use Pesticide (RUP), effective as of July 29, 2025. Vitals

- Percent active ingredient:
 - 0.5%
- Recommended use rate:
 - 3.2 oz. per 1,000 sq. feet
- High use rate (for high-level fly infestations):
 - 6.4 oz. per 1,000 sq. feet
- Group 28 Insecticide
- EPA Reg. No. 100-1541-89459

Features

- Low bulk density
- Active ingredient:
 - cyantraniliprole
- Single pellet controls up to 95 flies

Benefits

- Easy application
- Suitable for multiple use areas such as:
 - swine production barns
 - livestock housing facilities
 - horse stables
 - poultry/broiler houses
- Perfect rotational partner
- No odor
- No dusting during application

Sizes Available

- 4 lbs.
- 28 lbs.
