

SET THE BAR FOR FLY CONTROL WITH DURASTRIKE® FLY SCATTER BAIT FROM STARBAR

LEARN MORE ABOUT FLY CONTROL SOLUTIONS FROM THE STARBAR TEAM AT CENTRAL LIFE SCIENCES, INCLUDING EFFECTIVE PRODUCTS SUCH AS DURASTRIKE® FLY SCATTER BAIT.

Proper rotation is essential in fighting against fly bait resistance — allowing for even greater fly control on any operation. QuikStrike® Fly Scatter Bait (QuikStrike® bait), Golden Malrin® Fly Bait (Golden Malrin® bait), Cyanarox® Insecticidal Bait (Cyanarox® bait), and the new DuraStrike® Fly Scatter Bait (DuraStrike® bait) from Starbar. These all use different active ingredients, modes of action, and attractants that will reinforce the fight against resistance and boost profits.

YOUR FLY BAIT ROTATION JUST GOT STRONGER

DuraStrike® bait can be used in conjunction with QuikStrike® bait, Golden Malrin® bait, and Cyanarox® bait as an alternative or additional rotational product. Rotating among these diverse products can help you set the bar for fly control at the low levels of your operation.

DuraStrike® bait is a ready-to-use granular bait for use in and around residential, commercial, and agricultural structures to control house and fruit flies and to kill blow flies indoors. DuraStrike® bait can be applied as a scatter bait or in a refillable bait station in areas not accessible to children, pets or livestock. Use DuraStrike® bait to control flies, including house flies.

APPLICATION & INSECTS CONTROLLED

The Starbar® Fly Bait Station holds 2 oz. of bait and has a built-in tray that catches dead flies after they feed for when scattering baits isn't desired. It can be used with QuikStrike® bait, Golden Malrin® bait, Cyanarox® bait, and DuraStrike® bait to improve fly bait resistance management.

The amount of DuraStrike® bait applied can be adjusted to the level of fly population present, even as low as 1.6 oz. per 1,000 sq. ft. for the maintenance of fly populations. DuraStrike® bait is approved for use in and around dairies, broiler houses, stables, swine facilities, food processing plants, beverage processing plants, refuse dumpsters, feedlots, poultry houses and kennels.

The active ingredient in DuraStrike® bait is Indoxacarb and it's available in a 1lb. can and a 28 lb. bucket. DuraStrike® bait provides an alternative mode of action for insecticide resistance management and can be used as part of an Integrated Pest Management (IPM) program.

INTEGRATED PEST MANAGEMENT (IPM)

For the most effective control of flies, use DuraStrike® bait as part of an IPM program that also features traps, sprays and best practices. Effective IPM programs should combine best practices with proper product applications. The best practices of an IPM program should focus on proper sanitation, exclusion and monitoring practices. Proper product application is an essential component that should include a comprehensive mix of fly baits, fly traps, sprays, on-animal and feed-through solutions like those available in the Starbar® line of insect-control products.

A comprehensive IPM program consists of three phases: Planning, Implementation and Evaluation. By following the three steps in developing an IPM program, operators can protect the well-being of livestock and avoid lost production. With four fly baits that have different active ingredients, modes of action, and attractants, there is no reason to go anywhere else for your fly control needs.
