

There's a Simpler Way to Protect Your Investment Against Fire Ants

Give Fire Ants the Boot

Extinguish[®] Plus products protect cattle and equine from fire ants, killing the workers and sterilizing the queen

A HIGHER LEVEL OF CONTROL

Dual Action for Fire Ant Control

Benefits

- 1.5 lbs treats up to 1 acre
- Controls and eliminates colonies without colony relocation
- Starts killing ants immediately after ingestion
- Stops young colonies from developing into problem colonies
- Destroys visible and hidden colonies
- Approved for indoor and outdoor use
- Can be used as a broadcast application or to treat individual mounds

Extinguish® Plus fire ant bait combines the knockdown power of an adulticide (Hydramethylnon) and the long-lasting control of an Insect Growth Regulator (IGR), (S)-methoprene. The IGR sterilizes the queen and prevents rebound, while the adulticide kills problem worker ants. This two-way action ensures complete control of fire ants. Available in 1.5-lb, 4.5-lb and 25-lb containers.

Application Tips

Apply when ants are active and foraging. Place a potato chip near the mound and observe if ants begin feeding. Do not apply product if ants do not feed within a few minutes. Apply product when feeding occurs on the potato chip. Repeat application as needed.

Do not apply product within 6 hours of a rain event. Apply product when area is dry from dew or irrigation. Do not irrigate for 24 hours after application. The bait will become unattractive to ants if it becomes wet.
