

TWO WAYS

FOR FIGHTING FLIES ON PREMISE AND IN PASTURE

To prevent the development of house flies, stable flies, face flies and horn flies in the manure of treated livestock.

*House and stable flies only

To prevent the breeding of horn flies in the manure of treated beef cattle grazing on pasture.

THE SMALL PACK OPTION

There are going to be situations where livestock operations need to up the ante on fly control. That's why we created the ClariFly® Larvicide and Altosid® IGR Small Packs. These alternatives are designed to give producers options when it comes to adding feed-through fly control to their feed and mineral supplements.

SMALL PACKS CAN BE USED:

- When feed dealers do not carry the premix option
- For smaller herds where buying a premix is cost prohibitive
- To offer the flexibility of continuing a feed-through practice until the first hard frost

TWO WAYS

FOR ACCURATE APPLICATION

ClariFly® Larvicide Livestock Premix 0.67% - Flexibility to feed to Beef and Dairy Cattle, Swine, Equine, Sheep and Goats.

SEE THE POWER OF FEED-THROUGH FLY CONTROL

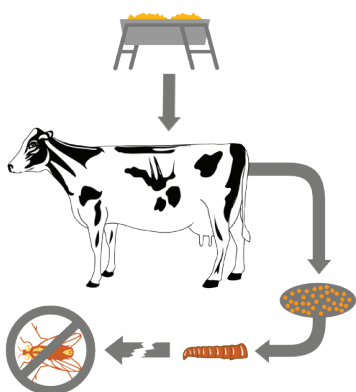

Feed-through fly control gets to the source of the swarm to stop flies before they get to an economic threshold that affects producer profitability. ClariFly® Larvicide and Altosid® IGR are easy-to-use and formulated to distribute the proper portion of active ingredient to mineral intake in order to effectively fight flies.

**CLARIFLY® LIVESTOCK
